- cleaner glass all year round

guaranteed

- 10 Year Warranty
- BSI Kitemarked units
- BS EN 1279 certified

warmer

- excellent thermal insulation
- U value of 1.2W/m²K
- minimal heat loss

heating bills rising?

In the average home, 80% of the energy used is for heating, but much of this heat just disappears through poorly insulated roofs, walls, windows and doors.

While many homes already have double glazing, a new generation of low-energy glass can dramatically reduce the amount of heat lost through the glazing

icosave energy saving glass improves insulation by 136% compared to conventional double glazing.

Ask your local window company to install icosave energy saving glass today.

improve insulation

icosave is a clear glass unit. Even though it looks just like ordinary glass, it isn't. It reflects heat back into your home, while letting in lots of natural daylight and free heat from the sun. So you save money on heating bills while enjoying a more comfortable home.

- icosave consists of two panes of clear glass
- the inner pane has a transparent low-energy coating
- icosave can be configured with float glass or toughened or laminated safety glass

Look for the label ...

Ask your installer about upgrading today.

Established in 1973, GlasSeal was the first manufacturer of hermetically sealed double glazing units in Ireland.

GlasSeal was also the first glass processor in Ireland to be awarded the British Standard Kitemark for its double glazing units.

Today, GlasSeal double glazing units are the industry benchmark for quality.

GlasSeal units are certified to EN1279, including Part 3 for Argon gas filling.

Only GlasSeal make icosave energy saving glass units. Every pane has a label identifying it as a genuine GlasSeal unit.
